Fallout 4 The continuation of one of the best post-apocalypse game series with a large and open world, which is rich in various interesting places, as well as plot and side tasks. One of my favourite parts of fallout. The game was created on the creation engine, thanks to which the project looks quite realistic and beautiful. The events of the game take place in Boston, 6 years after the events of the third part of the game. In fallout 4, we will have the opportunity to improve the equipment and arsenal of the protagonist, and we will also be able to rebuild various settlements as we please. Also in the game I really liked the atmosphere, thanks to which fallout 4 can be walked for hours traveling through the wastelands of this game world.

Metro exodus This is a first-person shooter with horror elements, which is famous for its graphics, realism and not a bad plot. The main character will have a large selection of arsenal and firearms that can also be modernized - and I liked this most in the game. The plot of Metro exodus is rich in various interesting moments that are really breathtaking and this sets the game apart from similar games of this genre. For example, the moment at the beginning of the passage, where the main character named Artem, on a steam locomotive called Aurora, with his friends and wife, goes on a big trip in the hope of finding a calm and quiet place to live. I strongly recommend going through this masterpiece, since such games are not often released.
